## 1. Introduction

To grant a fast setup of the device please follow carefully the information in this manual.

### 1.1. Staff skill

Products described in this manual are devoted to PLC programmers or automation experts only. MECT S.r.l. declines any responsibility about malfunctioning or damage caused by incorrect use of MECT devices, due to noncompliance to this manual information. MECT S.r.l provides an help desk service.

### 1.2. Symbols

#### Danger

Follow this advice to avoid people injury.

#### Warning

Follow this advice to protect the device.

#### Caution

Follow this advice to have a more effective performance.

#### ESD (Electrostatic discharge)

Danger: possibly damage due to Electrostatic discharge.

#### Note

Step to follow for a correct installation.

Additional information.

### 1.3. Terms

|            |                                  |
|------------|----------------------------------|
| PLC:       | TPAC1008 03                      |
| Terminals: | MPNC020, MPNC030, MPNC035        |
| Systems:   | PLC (TPAC1008 03) with terminals |
| PTO:       | Train pulse output               |

## 1.4. Security

### Attention

Switch off devices before connecting them.

**ESD** (Electrostatic discharge)

Modules have electronic components that can be damaged by electrostatic discharge. Be sure to be connected to ground when handle the devices.

The instrument has not power switch and internal fuse, but it powers on immediately after connecting a correct power supply input (check the power supply value on the instrument label). Keep the power supply line as short as possible and keep it separate from other power lines.

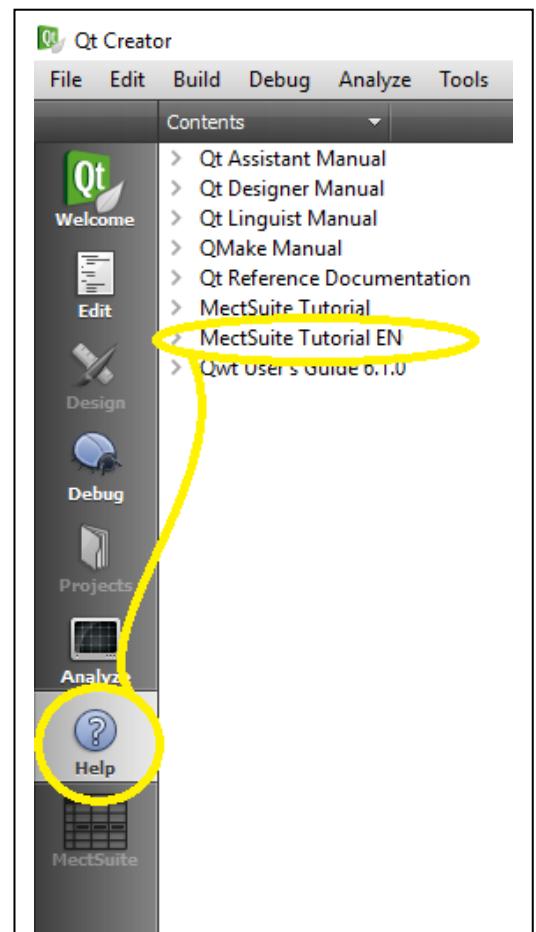

For security reasons it is necessary to have a 2 section power switch with a fuse near the instrument and easily approachable.

Avoid the presence of other power actuators in the same control panel, high humidity, excessive heat and corrosive gas.

Instruments must have a power supply from security transformers or SELV transformers.

## 1.5. Reference manual

The **Quick Start** (downloadable from the web site) and **MectSuite Tutorial** are the reference manuals for MectSuite to develop HMI and PLC applications.

## 2. System description

TPAC1008 03 is a device composed by a PLC and a HMI with touch-screen monitor 7" width and 800 x 480 pixel resolution with 262.000 colors. TPAC1008 03 has digital and analog inputs and outputs, CanOpen and Modbus fieldbus, and a 100Mbit/s Ethernet interface.

The networks are managed simultaneously by TPAC1008 03 and data from a network can be sent to another thus creating a bridge between the two networks.

On TPAC1008 03 there is an USB host port , that allows, with an adapter, the use of an USB pen drive for software updates and data log. Through a GPRS/UMTS or Wi-Fi key (optionally sold by Mect) is possible to connect the operator panel to a Wi-Fi or Mobile network. Settings under MENU → OPTIONS → NETWORK\_CFG → tab “Wi-Fi” or tab “Mobile”

On TPAC1008 03 there are up to 1 Kbyte of retentive variables stored on flash.

Instrument can be ordered with landscape or vertical (V option) orientation (see following pictures).

Figure 1: front view TPAC1008 03 (landscape version)

Figure 2: front view TPAC1008 03 (vertical version)

**2.1 Specifications**

Il TPAC1008 03 is based on a multiprocessor system. PLC and HMI are based on a 454MHz ARM9, I/O interface and acquisition is managed by a Cortex M3 processor. Two systems are on different boards and communicate via a CAN interface.

Table 1

| <b>PLC Hardware characteristics</b> |           |  |
|-------------------------------------|-----------|--|
| PLC Processor                       |           | ARM926JE 454MHz  |
| RAM                                 |           | 128MB  |
| FLASH                               |           | 128MB  |
| Non volatile variables              |           | On FLASH memory  |
| Real Time Clock                     |           | Yes with rechargeable battery  |
| Screen 7"                           |           | TFT 800 x 480 pixel 262k colors  |
| Touch screen                        |           | Resistive 4 wires  |
| Ethernet                            |           | 10Mbit/s - 100Mbit/s self recognition  |
| USB                                 |           | Host 2.0   |
| CANOpen                             |           | 1 channel  |
|                                     |           | Max Bit rate : 1Mbit/sec   |
|                                     |           | Cycle time : 10msec  |

| Pollution according to IEC 61131-2 | 2                               |
| <b>Protection</b>                  |                                 |
| Rear protection                    | IP 20                           |
| Front protection                   | IP65                            |

### Attention

Install the devices in an electrical cabinets with no more than 55°C.

### 3.2. Panel mounting

#### 3.2.1 Distance

The system must be installed with enough space for heat dissipation and cabling. Avoid cables superimposing to prevent EMC problems.

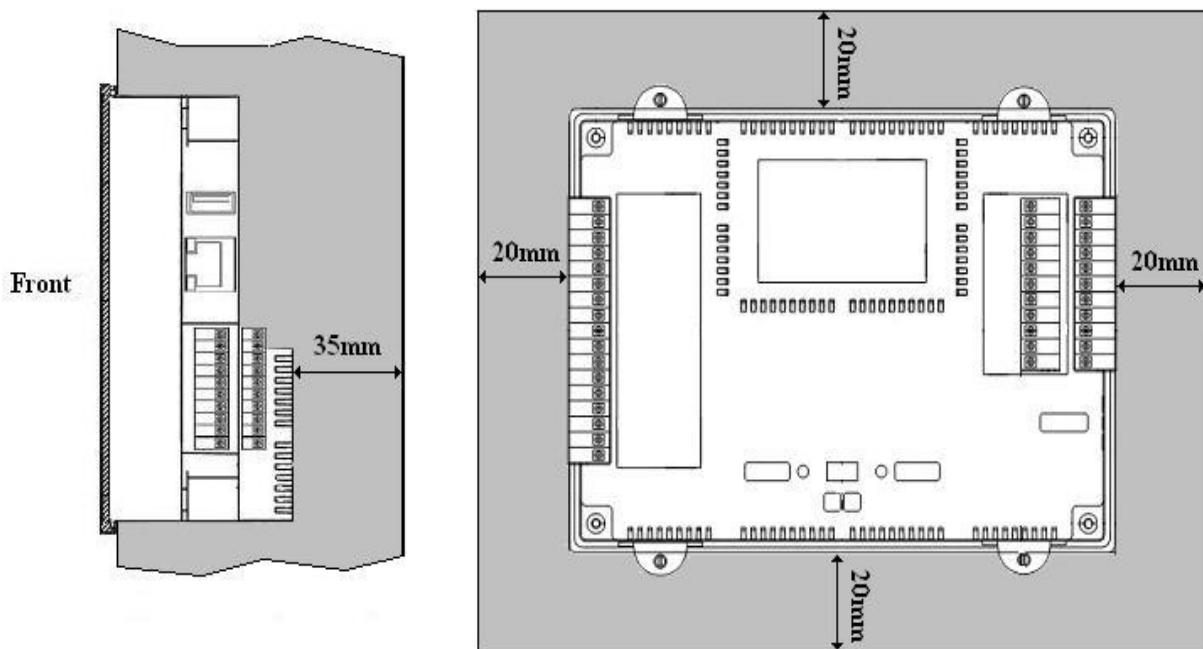

Figure 6A – Horizontal mounting

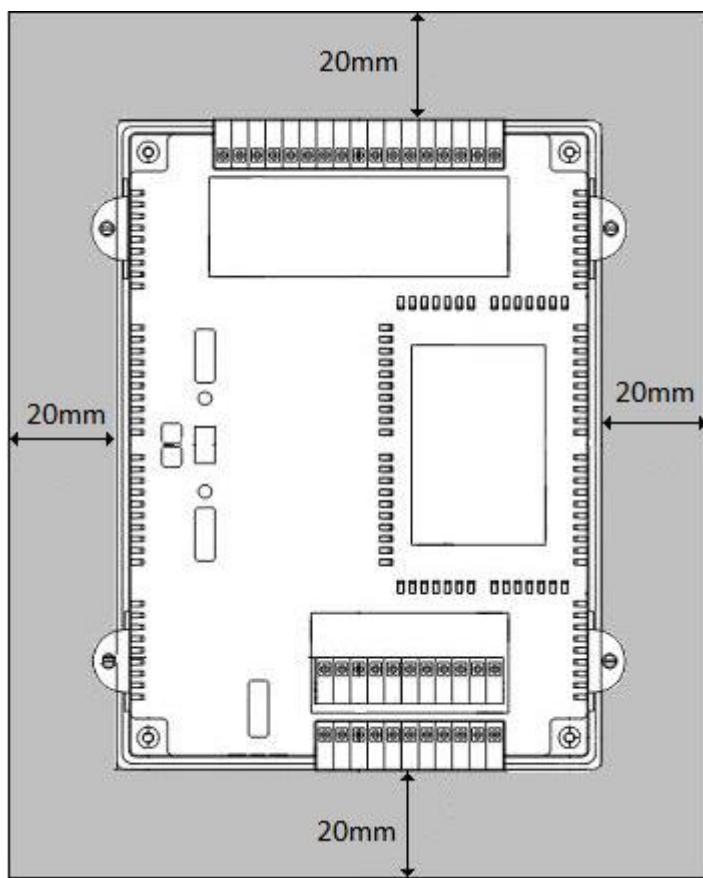

Figure 6B – Vertical mounting

## 4. TPAC1008 03 wiring

### 4.1. Connections

In the following figure the wiring diagram with the available I/O is shown.

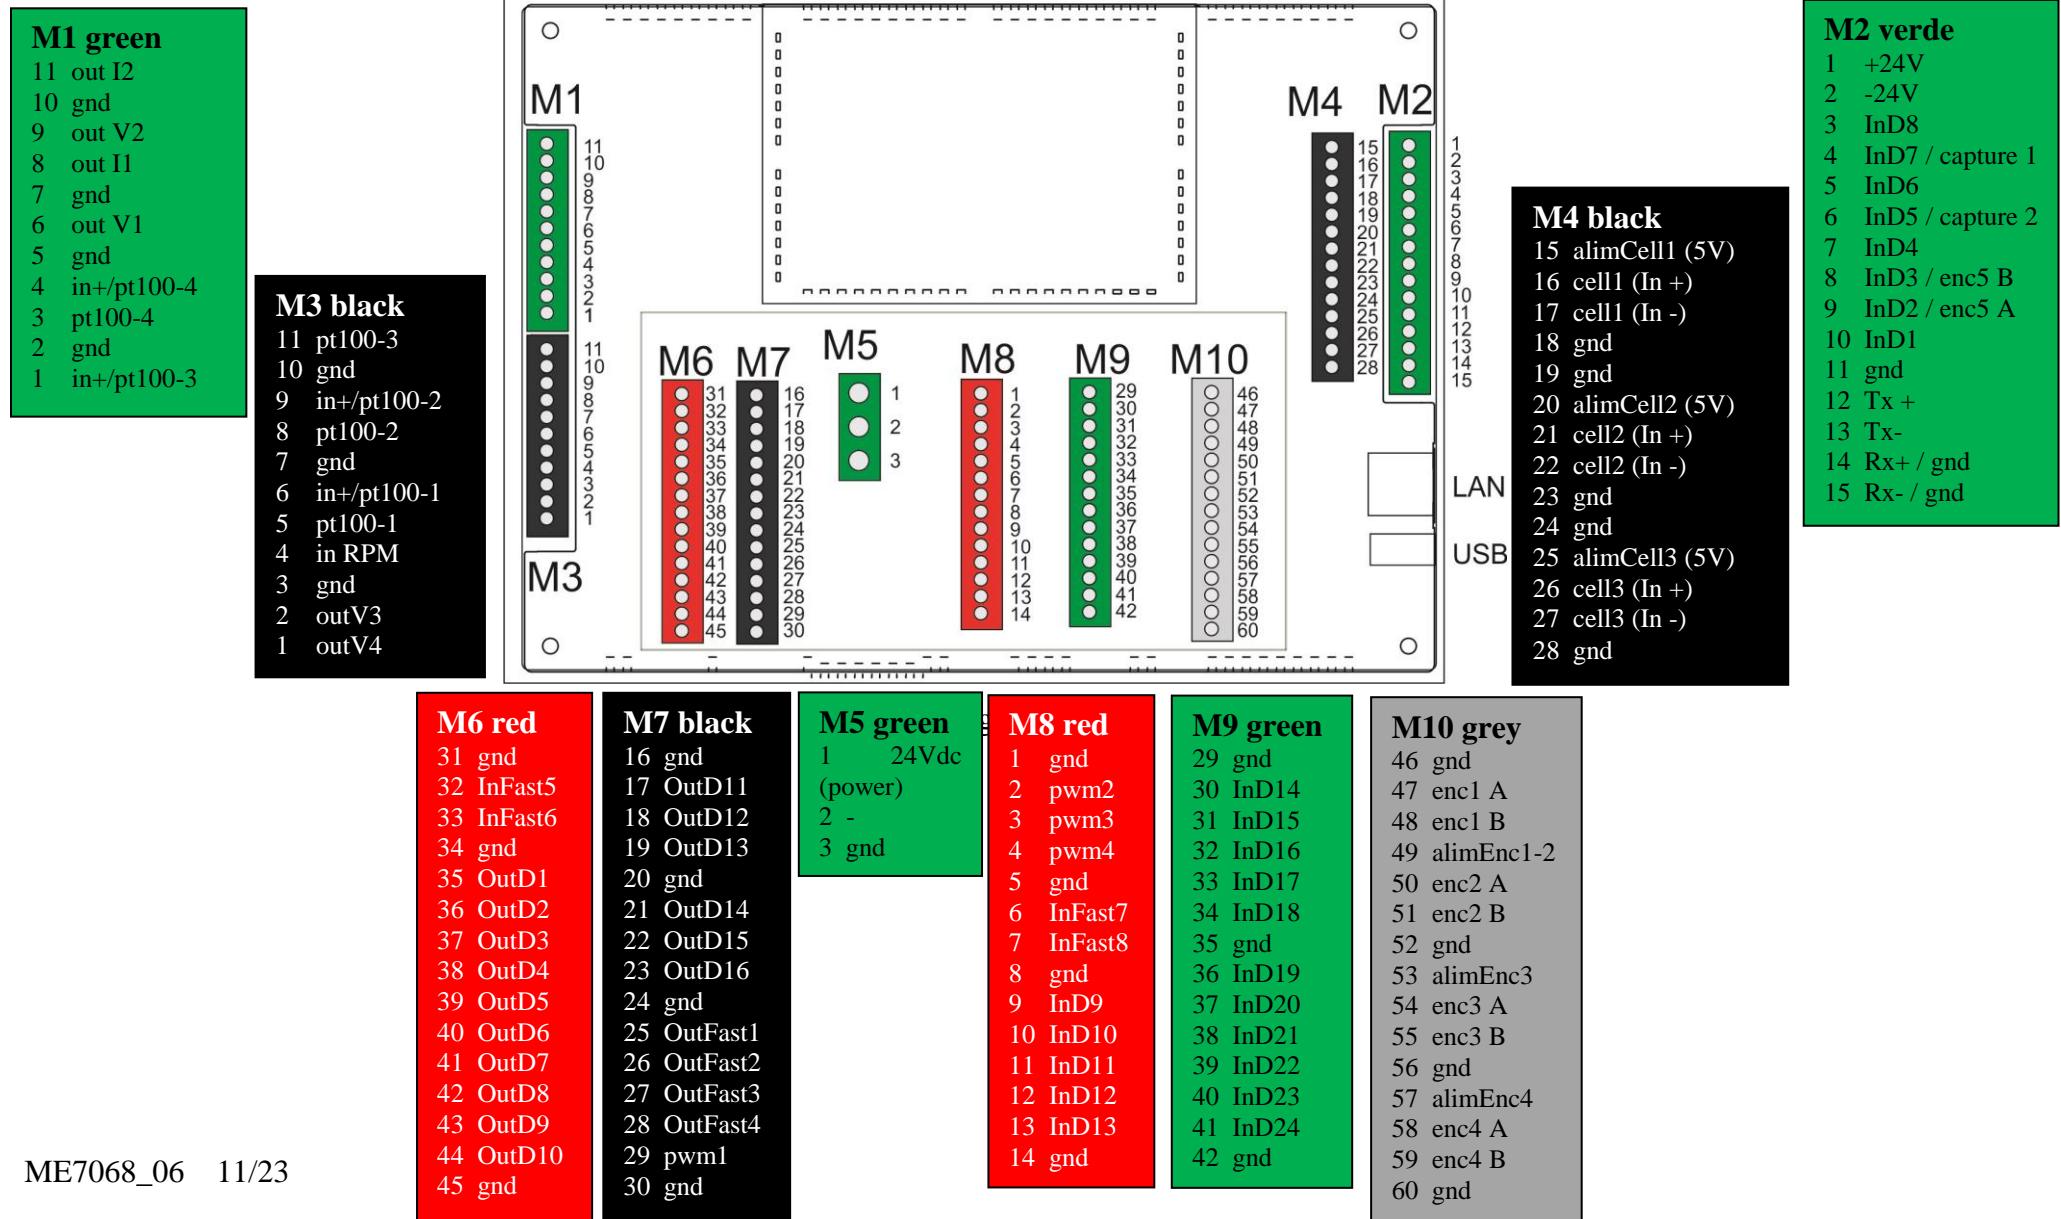

Table 3

| TPAC1008 03 AD                  |      |  |                                |            |  |

## 4.2 Power supply

### 4.2.1. Isolation

The device has not galvanic isolation between inputs, outputs and power supply.

### 4.2.2 System power supply

The TPAC1008 03 has a 24Vdc (12-36Vdc) supply according to the scheme in the figure. The system is protected against reverse power supply.

As shown in the figure, the digital outputs must have a separate power supply respect the main power supply of the instrument.

### 4.2.3 Digital output power supply

Digital outputs must have a separate power supply respect the main power supply of the TPAC1008 03 to avoid consequences on control system due to I/O problems.

### 4.2.4. Fuse

The system has not internal fuses, thus the use of an external 1A fuse is recommended for the panel power supply and an external 3A delayed fuse for the I/O power supply.

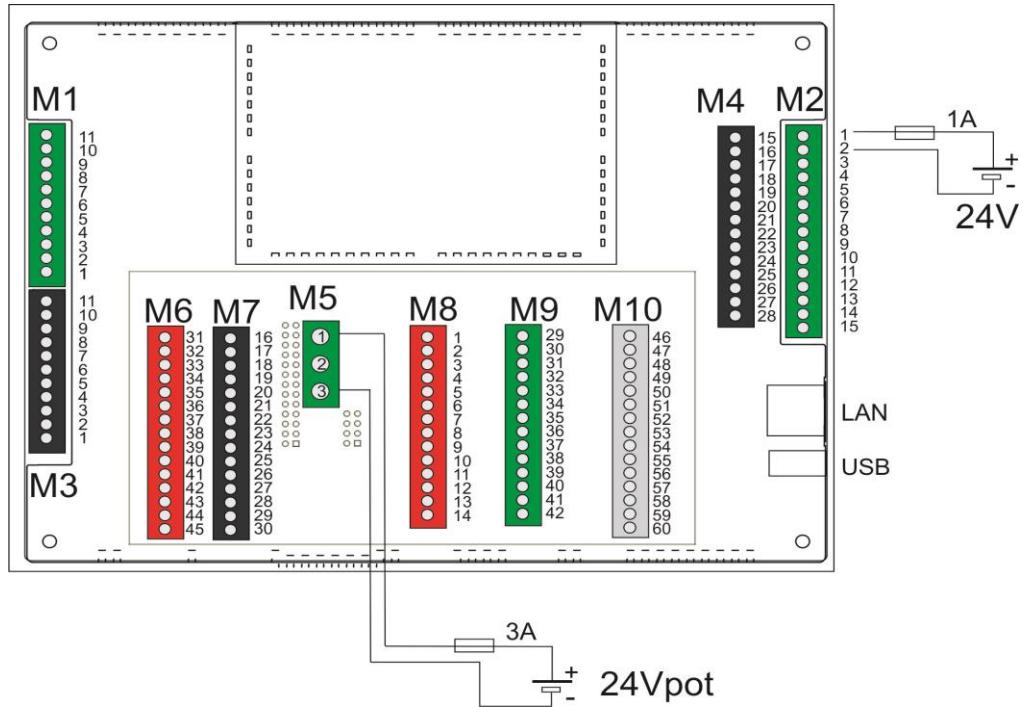

Figure 8

**Attention**

A wrong value for the power supply can cause a damage to the device.

#### 4.3 Digital input/output wiring

The digital I/Os are PNP type, the wiring must follow the scheme below.

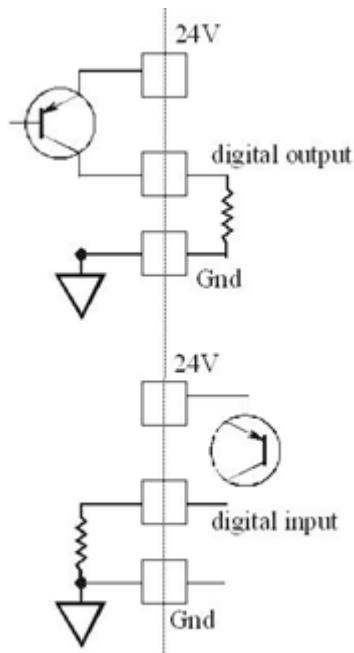

Figure 9

Each digital output can provide a 200mA max, and the total sum of the output currents can not be more than 2A.

#### **4.4. Analogue input wiring**

By means of the PLC program the TPAC1008 03 can be configured to connect several analog input type. Configuration is done by the setup of a system variable in the PLC program. Configuration can be set up and modified in any moment.

##### **4.4.1. Thermocouples inputs**

Configuring inputs as thermocouples it is possible to connect up to 4 of the following type:

J( $0^{\circ}\text{C} \div 600^{\circ}\text{C}$ ),  
T( $0^{\circ}\text{C} \div 400^{\circ}\text{C}$ ),  
K( $0^{\circ}\text{C} \div 1200^{\circ}\text{C}$ )  
S( $0^{\circ}\text{C} \div 1710^{\circ}\text{C}$ )  
B( $100^{\circ}\text{C} \div 1800^{\circ}\text{C}$ )  
R( $0^{\circ}\text{C} \div 1500^{\circ}\text{C}$ )

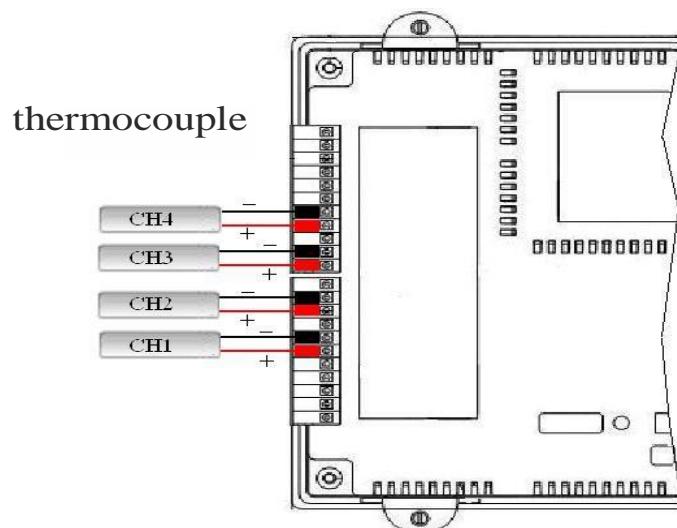

Figure 10

**4.4.2. PT100 inputs**

Il TPAC1008 03 can be connected to PT100. 2 different scales are possible:

From  $-40.0^{\circ}\text{C}$  to  $200.0^{\circ}\text{C}$

From  $-40^{\circ}\text{C}$  to  $800^{\circ}\text{C}$

The scale from  $-40.0^{\circ}\text{C}$  a  $200.0^{\circ}\text{C}$  has a resolution of  $0.1^{\circ}\text{C}$ .

The scale from  $-40^{\circ}\text{C}$  a  $800^{\circ}\text{C}$  has a resolution of  $1^{\circ}\text{C}$  instead.

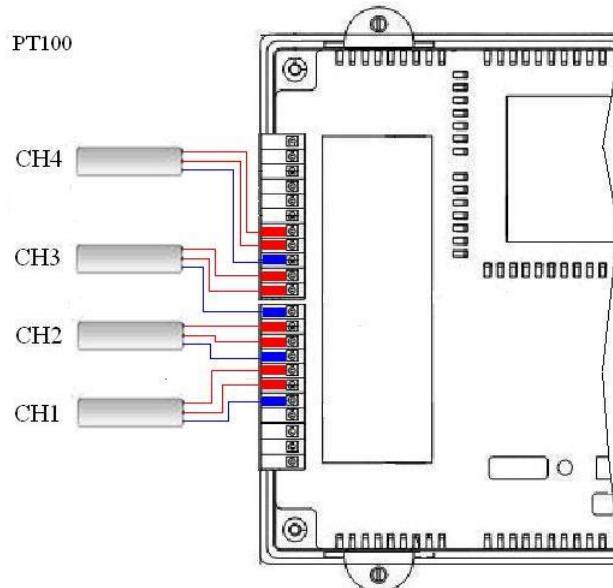

Figure 11

**4.4.3. Voltage/Current inputs**

Configuring input as  $0\text{--}10\text{V}$  or  $4\text{--}20\text{mA}$  is possible to connect up to 4:

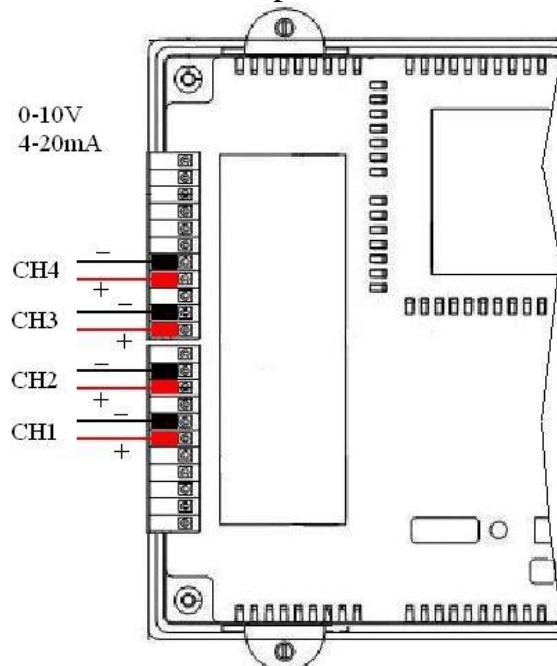

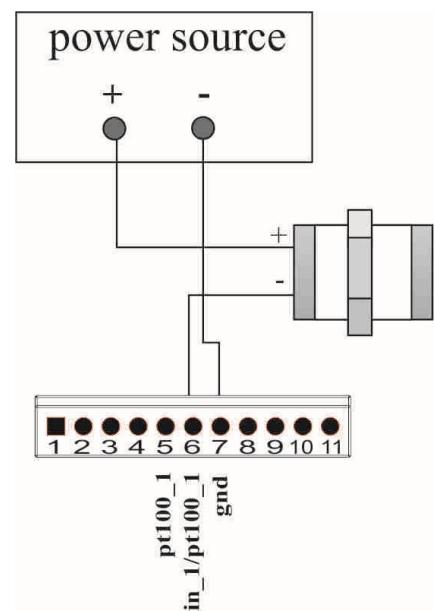

Figure 12

mA/V Input. Analogue inputs 4÷20mA and 0÷10V are connected to input and GND terminals. See figure to connect a 2 wire transducer with external power supply.

#### 4.4.4. Load cell inputs

On the TPAC1008 03 there are 3 inputs for load cells

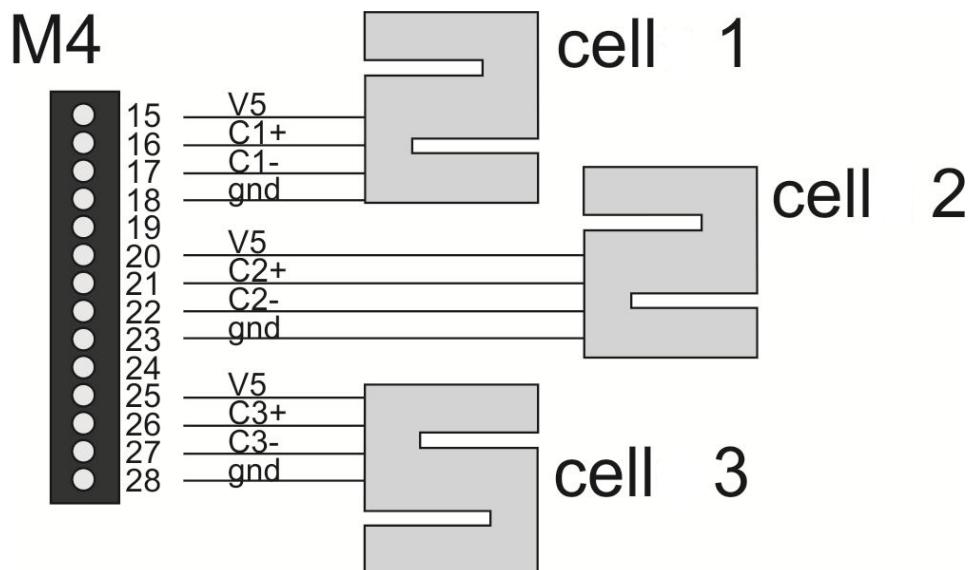

Figure 13

#### 4.4.5. Encoder inputs

On TPAC1008 03 there are 5 encoder inputs

#### Bidirectional encoder

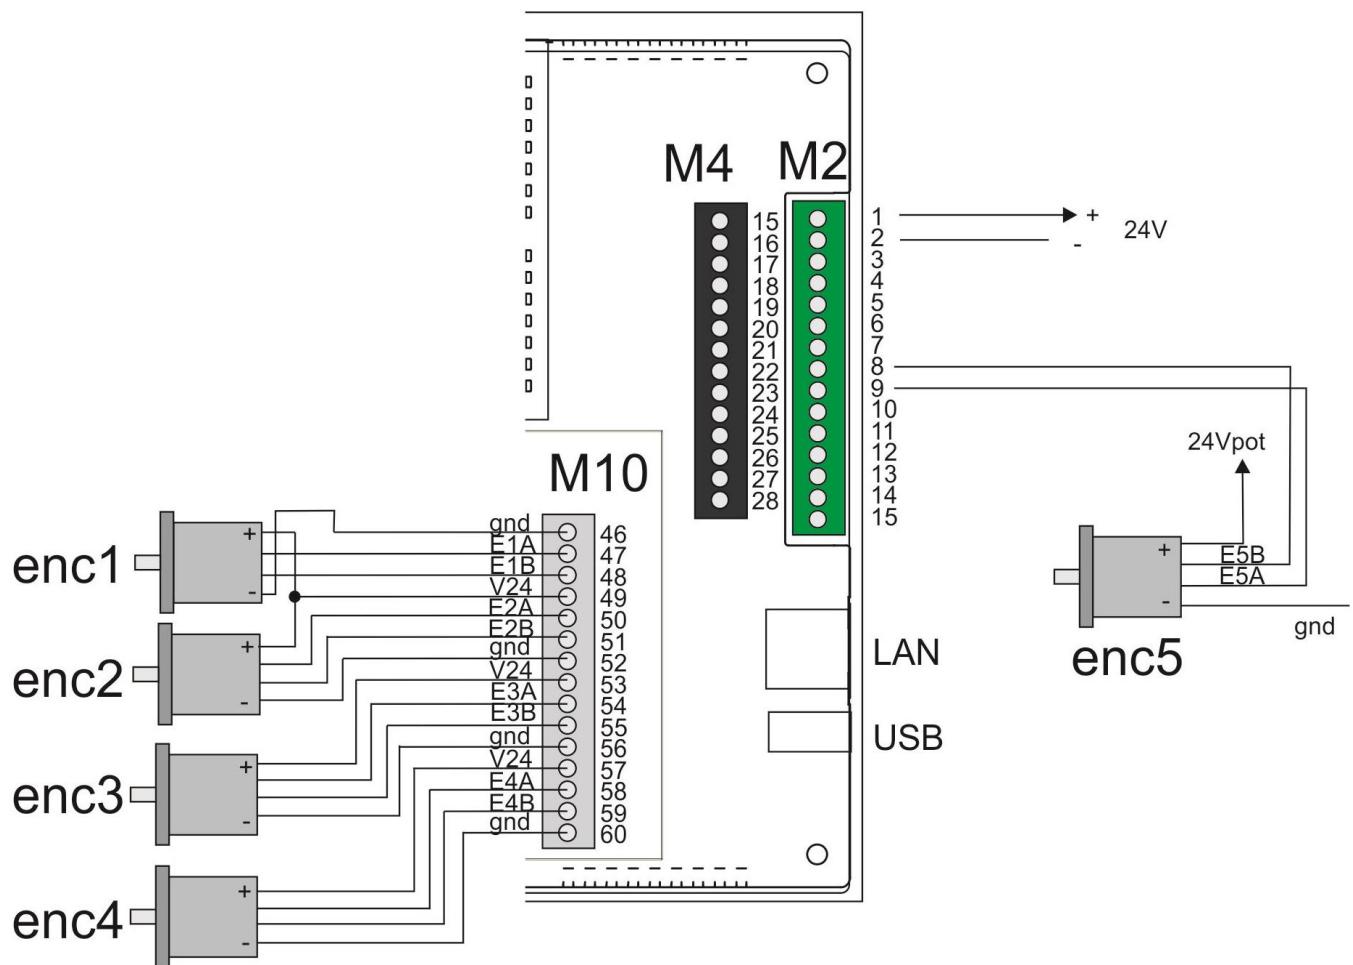

Figure 14

## Monodirectional encoder:

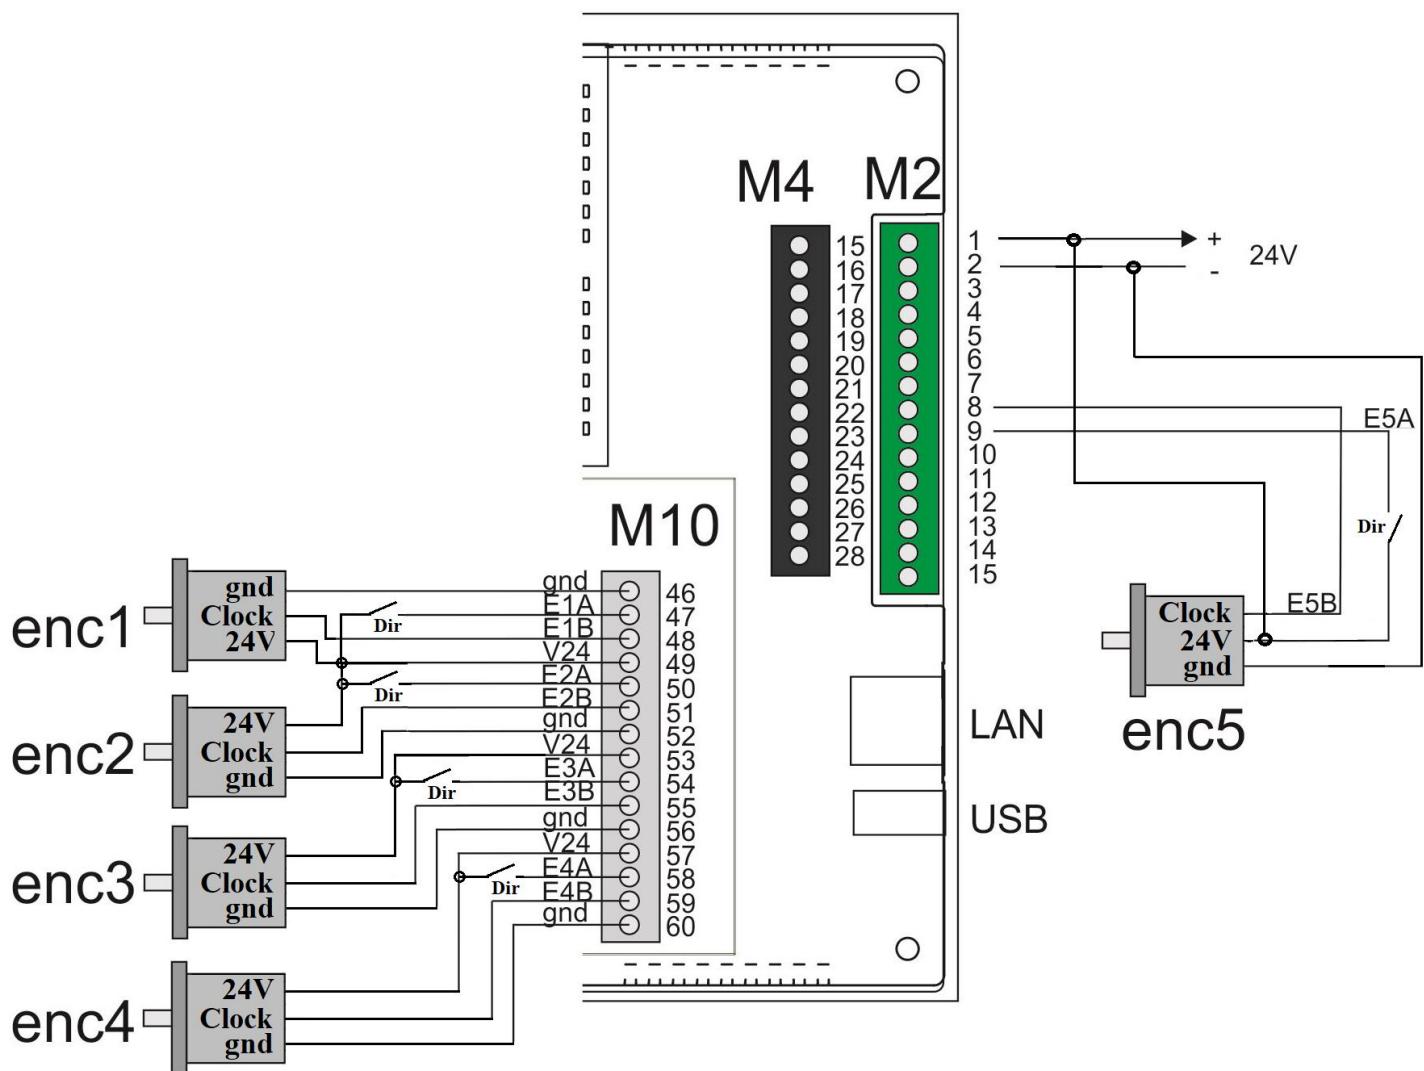

Figure 15

#### 4.5. Analog outputs wiring

2 analog output channels are available.

See in the figure 15 the analog current output wiring.

##### 4.5.1. Output current

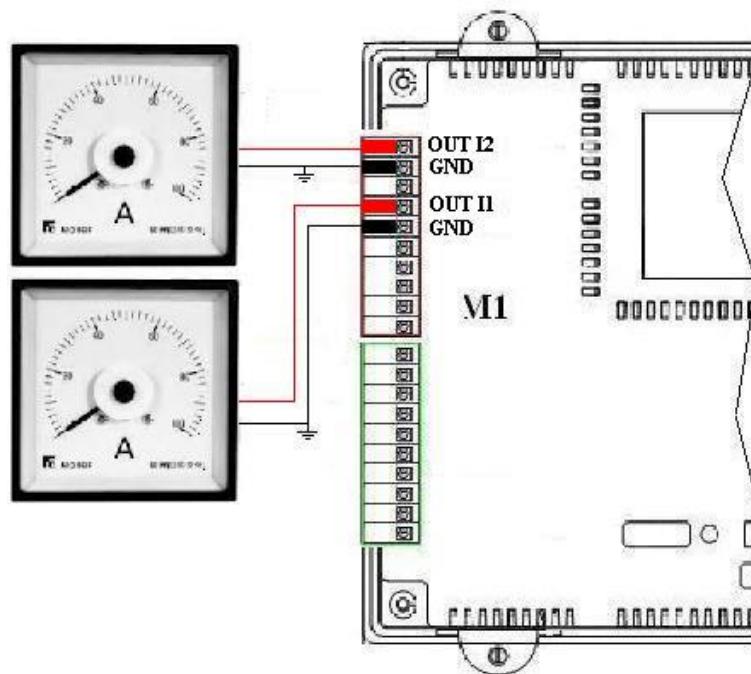

Figure 16

##### 4.5.2. Voltage output

See in the figure 16 the analog voltage output wiring.

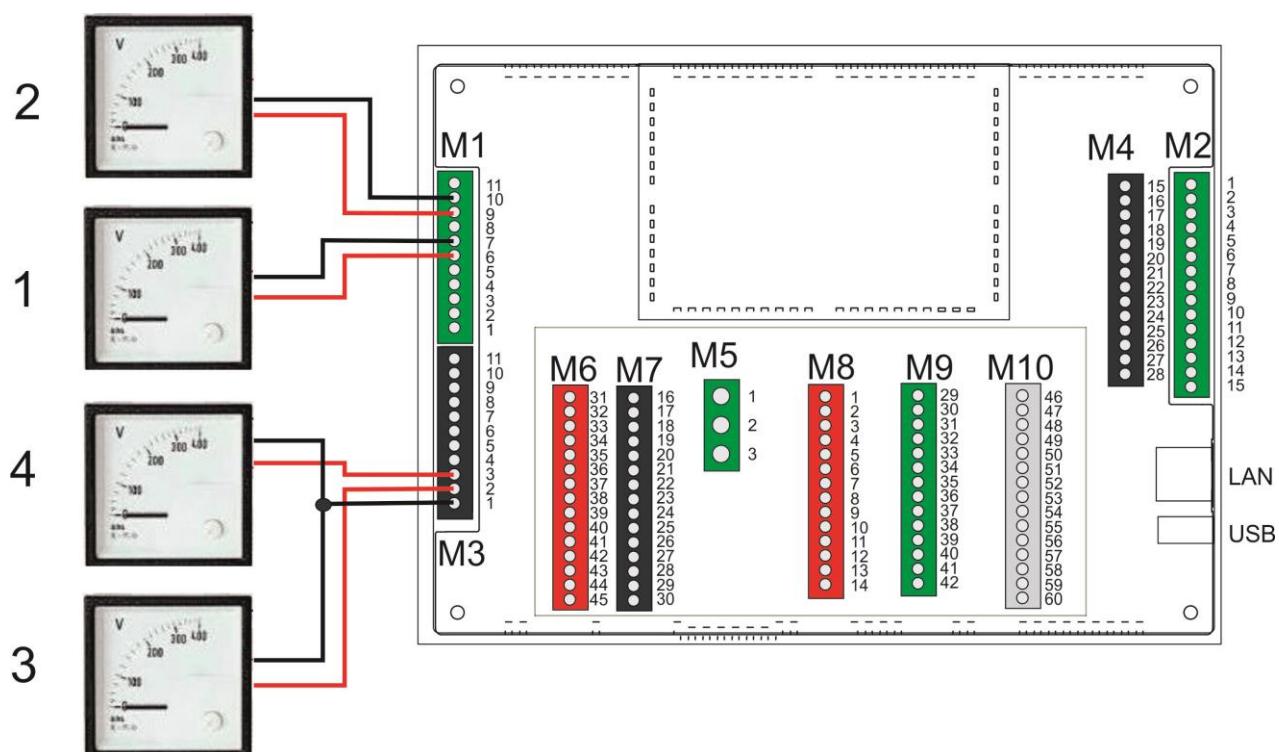

Figure 17

#### 4.6. ModBus wiring (available in all models)

The ModBus interface on the TPAC1008 03 is a 4 wires RS485 serial one, on M2 terminal on the pins shown in the following table.

Table 9

| Pin | Segnale | Descrizione        |
|-----|---------|--------------------|
| 11  | GND     |                    |
| 12  | TX +    | Line + Trasmission |
| 13  | TX -    | Line - Trasmission |
| 14  | RX +    | Line + Reception   |
| 15  | RX -    | Line - Reception   |

Here is a wiring example of a system composed by:

- MPNC006
- MPNC020
- MPNC030
- TPAC1008 03

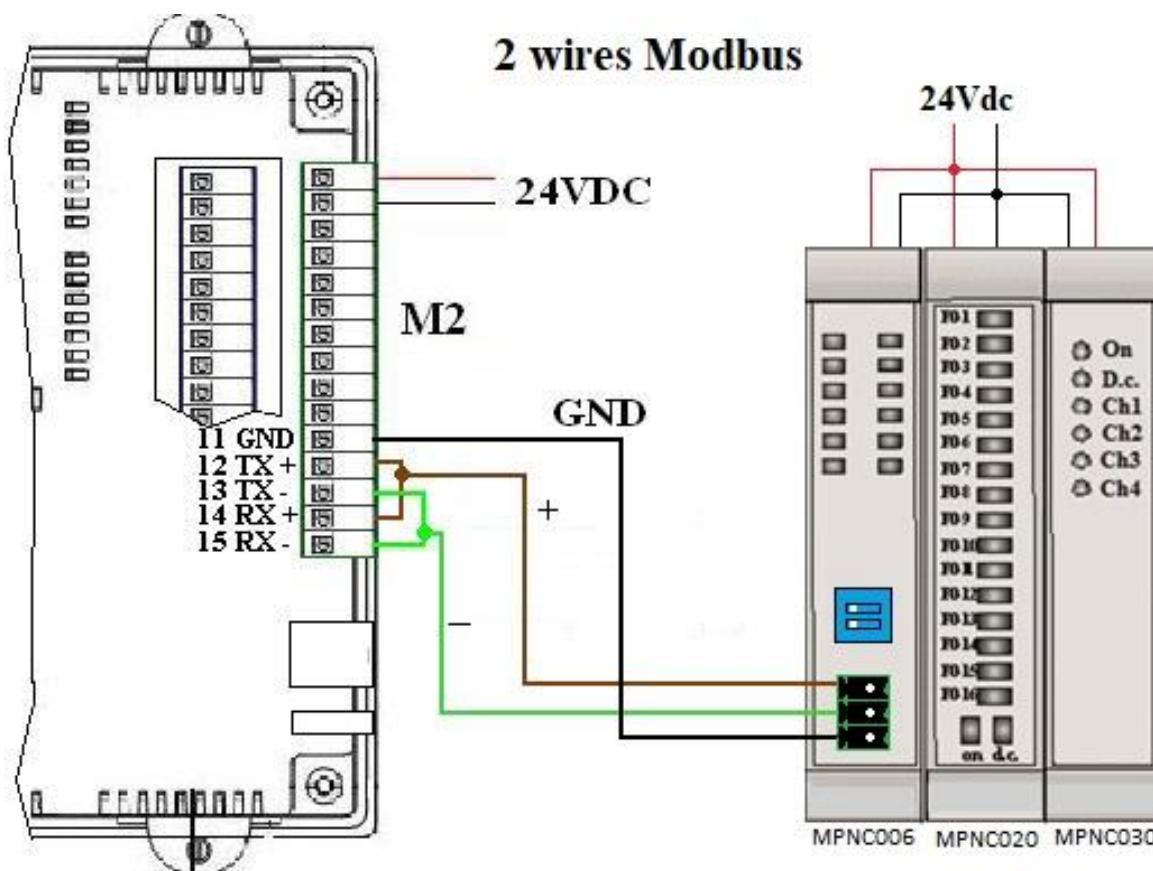

Figure18

## 5. Peripherals

### 5.1. *USB*

On TPAC1008 03 there is USB 2.0 host, that can be used for:

- software updating.
- data storage: data logger.
- connecting USB peripherals as printers, mouse, etc.
- connecting a Wi-Fi or Mobile key (optionally supplied by Mect) to connect to a different network from LAN.

**Specific connection of external peripherals are implemented on request.**

### 5.2. *Ethernet*

TPAC1008 03 has a 10/100Mbit/s Ethernet port with auto configuration, with direct or inverse connection cable.

Il TPAC1008 03, by Ethernet, can be controlled by a personal computer, it is possible to control the I/O of TPAC1008 03 by a PC program.

## 6. PLC and HMI

To program TPAC1008 03 it is necessary to develop 2 software.

A PLC program written with the IDE software PLC program.

A human machine interface program (HMI) written with Qt Creator.

A PLC program can be written using one of the following standard IEC 61131-3 languages:

Table 10

| FBD      | Functional Block Diagram  | Graphic | Contact scheme          |
|----------|---------------------------|---------|-------------------------|
| LD       | Ladder                    | Graphic | Ladder scheme           |
| SFC      | Sequential Function Chart | Graphic | State Diagram           |
| ST       | Structured Text           | Text    | Pascal-like language    |
| IL (AWL) | Instruction List          | Text    | Assembler-like language |

The 2 programming environment (PLC and HMI) are for Windows OS.

## 6.1. System variables

Here some system variables available for PLC program.

Table 11

| Nome Variabile                  | Description                  | R/W | Note   |
|---------------------------------|------------------------------|-----|--|
| PLC_Hwconf                      | HW configuration             | RO  | 0x32 TPAC1008 03 AD  |
| PLC_Revisione                   | Firmware revision            | RO  |  |

| CH0_01_NODEDIS  | In Out board - disable the bus       | RW |  |

After that the variables are available in read / write mode as described in the program tutorial. The system can use 5472 interchange variables between HMI and automation (at maximum) which include:

internal variables, interchange variables on Modbus network, retentive variables.

The variables are defined by a software “Mect Suite”.

## 7. How to order

### TPAC1008 03 A - Existing interfaces

- 1 Rs485 4 wires
- 1 Ethernet 10/100 Base-T
- 1 USB 2.0 host port
- 24 Digital inputs (PNP 0-24Vdc)
- 4 Fast inputs (PNP 0-24Vdc)
- 4 Analog inputs (0÷10V, 0÷20mA, Pt100, J, K, T, S, B, R) 12bit resolution
- 5 Encoder inputs
- 3 Load cells inputs, 24bit resolution
- 16 Digital outputs (PNP 0-24Vdc)
- 4 Fast outputs (PNP 0-24Vdc)
- 2 Analog outputs (0÷10V or 0÷20mA or PWM @250Hz) 12bit resolution
- 4 PTO (train pulse outputs)

#### A - Interface

D = 2 analog outputs 0÷10V or PWM @250Hz

#### B - Orientation

Blank = Horizontal  
V = Vertical

#### C - Options

Upon customer's request
